PHYSICAL THERAPY AQUA - MED

Patient's Name

DOA

Aqua - Med session incorporate the Physiological benefits of hydrotherapy scupressure, soft tissue manipulation and trigger point therapy. These elements contained together uphold the ability to stimulate circulation, increase flexibility and range of motion in tandem of promoting overall heating and pain reduction.

This therapeutic modality serves as an adjunct to the manual treatment regimes currently provided to the patient. The therapeutic modality is foremost referred to chronic pain sufferers subjected to paravertebral muscle spasm, substantive soft tissue inflammation and/or inflammations surrounding ligamentous-holding structures. Its resolve encumbers pain suppression, decreasing muscle spasm/guarding, improving peripheral vascular circulation and helping to increase the patient's overall treatment compliance.
